   fixture
                               dvd2 = new DVD("The Steve Jobs Film");  //title with 19 characters
                               dvd3 = new DVD("Avatar: Directors Cut"); //title with 21 characters
                               dvd4 = new DVD();
  Tearing
                           @After
 down the
                           public void tearDown(){
test fixture
                           @Test
                           public void testConstructors(){
                               assertEquals("The Hobbit(Director)", dvd1.getTitle());
                               assertEquals("The Steve Jobs Film", dvd2.getTitle());
                               assertEquals("Avatar: Directors Cu", dvd3.getTitle());
                               assertEquals(null, dvd4.getTitle());
     Test
                           public void testGetTitle(){
  Methods
                               assertEquals("The Hobbit(Director)", dvd1.getTitle());
                               assertEquals("The Steve Jobs Film", dvd2.getTitle());
```

General Terminology

Assertions

Annotations

First you import the Assert class from org.junit

```
D.java

    *DVDTest.java 
    □

import static org.junit.Assert.*;
import org.junit.After;
import org.junit.Before;
import org.junit.Test;
public class DVDTest {
    private DVD dvd1, dvd2, dvd3, dvd4;
    @Before
    public void setUp(){
        dvd1 = new DVD("The Hobbit(Director)"); //title with 20 characters
        dvd2 = new DVD("The Steve Jobs Film");  //title with 19 characters
        dvd3 = new DVD("Avatar: Directors Cut"); //title with 21 characters
        dvd4 = new DVD();
    @After
    public void tearDown(){
    @Test
    public void testConstructors(){
        assertEquals("The Hobbit(Director)", dvd1.getTitle());
        assertEquals("The Steve Jobs Film", dvd2.getTitle());
        assertEquals("Avatar: Directors Cu", dvd3.getTitle());
        assertEquals(null, dvd4.getTitle());
    @Test
    public void testGetTitle(){
        assertEquals("The Hobbit(Director)", dvd1.getTitle());
        assertEquals("The Steve Jobs Film", dvd2.getTitle());
```

Test
Methods
contain
assertions

The Assert Class

- To check if code is behaving as you expect, you use an assertion.
- An assertion is a simple method call that verifies that something is true.
- The Assert class Contains a set of assertion methods useful for writing JUnit tests.
- Only failed assertions are recorded i.e. an AssertionError is thrown and handled by JUnit.

The Assert Class

These methods can be used directly:

```
Assert.assertEquals(...);
```

 However, they read better if they are referenced through a static import:

```
import static org.junit.Assert.*;
...
use this
approach.
```

Some common Assert methods (1)

Method Summary		
static void	assertEquals (double expected, double actual, double delta)	
	Asserts that two doubles are equal to within a positive delta.	
static void	assertEquals (long expected, long actual)	
	Asserts that two longs are equal.	
static void	assertEquals(Object expected, Object actual)	
	Asserts that two objects are equal.	
static void	assertNotEquals (double unexpected, double actual, double delta)	
	Asserts that two doubles are not equal to within a positive delta.	
static void	assertNotEquals(Object unexpected, Object actual)	
	Asserts that two objects are not equals.	
static void	assertNotSame(Object unexpected, Object actual)	
	Asserts that two objects do not refer to the same object.	
static void	assertSame(Object expected, Object actual)	
	Asserts that two objects refer to the same object.	

http://junit.org/javadoc/latest/

Some common Assert methods (2)

Method Summary		
static void assertNotNull(Object object)		
Asserts that an object isn't null.		
static void assertNotNull(String message, Object object)		
Asserts that an object isn't null.		
static void assertNull(Object object)		
Asserts that an object is null.		
static void assertFalse(boolean condition)		
Asserts that a condition is false.		
static void assertTrue(String message, boolean condition)		
Asserts that a condition is true.		
static void fail()		
Fails a test with no message.		
static void fail(String message)		
Fails a test with the given message.		

assertEquals in DVDTest.java

```
□ DVDTest.java □ LibraryTest.java □ DVD.java

 1. import static org.junit.Assert.*;
 6 public class DVDTest {
       private DVD dvd1, dvd2, dvd3;
 8
 9
1 ()⊖
       @Before
11
       public void setUp(){
12
           dvd1 = new DVD("The Hobbit(Director)"); //title with 20 characters
13
           dvd2 = new DVD("The Steve Jobs Film");  //title with 19 characters
           dvd3 = new DVD("Avatar: Directors Cut"); //title with 21 characters
14
15
16
18⊕
       public void tearDown() {
20
       public void testConstructors() {
22⊕
27
2.9⊕
       public void testGetTitle(){
34
35⊜
       @Test
36
       public void testSetTitle() {
37
           dvd1.setTitle("The Hobbit");
38
           assertEquals ("The Hobbit", dvd1.getTitle());
           dvd1.setTitle("The Hobbit (Director)"); //attempting to set title to 21 characters
39
           assertEquals ("The Hobbit (Director", dvd1.getTitle());
40
           dvd1.setTitle("The Hobbit(Director)"); //attempting to set title to 20 characters
41
           assertEquals ("The Hobbit(Director)", dvd1.getTitle());
42
43
           dvd1.setTitle("The Hobbit:Director"); //attempting to set title to 20 characters
44
           assertEquals ("The Hobbit:Director", dvd1.getTitle());
45
46
48⊕
       public void testToString() {
53
54 }
```

Recall the generated DVDTest.java?

```
🄰 DVDTest.java 💢
 1 import static org.junit.Assert.*;
   import org.junit.Test;
    public class DVDTest {
 70
        @Test
        public void test() {
            fail("Not yet implemented");
```

Assertions

Annotations

```
    *DVDTest.java 
    □

D.java
import static org.junit.Assert.*;
import org.junit.After;
import org.junit.Before;
import org.junit.Test;
public class DVDTest {
    private DVD dvd1, dvd2, dvd3, dvd4;
    @Before
    public void setUp(){
        dvd1 = new DVD("The Hobbit(Director)"); //title with 20 characters
        dvd2 = new DVD("The Steve Jobs Film");  //title with 19 characters
        dvd3 = new DVD("Avatar: Directors Cut"); //title with 21 characters
        dvd4 = new DVD();
    @After
    public void tearDown(){
    @Test
    public void testConstructors(){
        assertEquals("The Hobbit(Director)", dvd1.getTitle());
        assertEquals("The Steve Jobs Film", dvd2.getTitle());
        assertEquals("Avatar: Directors Cu", dvd3.getTitle());
        assertEquals(null, dvd4.getTitle());
    @Test
    public void testGetTitle(){
        assertEquals("The Hobbit(Director)", dvd1.getTitle());
        assertEquals("The Steve Jobs Film", dvd2.getTitle());
```

These methods have Annotations

@someword

What are Annotations?

 Annotations provide data about a program that is not part of the program itself. They have no direct effect on the operation of the code they annotate.

 Annotations can be applied to a program's declarations of classes, fields, methods, and other program elements.

What are Annotations?

- Annotations have a number of uses, among them:
 - Information for the compiler Annotations can be used by the compiler to detect errors or suppress warnings.
 - Compiler-time and deployment-time processing —
 Software tools can process annotation information to generate code, XML files, and so forth.
 - Runtime processing Some annotations are available to be examined at runtime.

Import the required Annotation class(es) from org.junit.

@Before – run the method before each test.

@After – run the method after each test.

@Test -identifies that a method is a test method.

```
    *DVDTest.java 
    □

D.java
import static org.junit.Assert.*;
import org.junit.After;
import org.junit.Before;
import org.junit.Test;
public class DVDTest {
    private DVD dvd1, dvd2, dvd3, dvd4;
    @Before
    public void setUp(){
        dvd1 = new DVD("The Hobbit(Director)"); //title with 20 characters
        dvd2 = new DVD("The Steve Jobs Film");  //title with 19 characters
        dvd3 = new DVD("Avatar: Directors Cut"); //title with 21 characters
        dvd4 = new DVD();
    public void tearDown(){
    @Test
   public void testConstructors(){
        assertEquals("The Hobbit(Director)", dvd1.getTitle());
        assertEquals("The Steve Jobs Film", dvd2.getTitle());
        assertEquals("Avatar: Directors Cu", dvd3.getTitle());
        assertEquals(null, dvd4.getTitle());
    @Test
    public void testGetTitle(){
        assertEquals("The Hobbit(Director)", dvd1.getTitle());
        assertEquals("The Steve Jobs Film", dvd2.getTitle());
```

Other Useful Junit Annotations

@BeforeClass public void method()	Will execute the method once, before the start of all tests. This can be used to perform time intensive activities, for example to connect to a database.
@AfterClass public void method()	Will execute the method once, after all tests have finished. This can be used to perform clean-up activities, for example to disconnect from a database.
@lgnore	Will ignore the test method. This is useful when the underlying code has been changed and the test case has not yet been adapted. Or if the execution time of this test is too long to be included.

                                assertEquals("The Hobbit(Director)", dvd1.getTitle());
                                assertEquals("The Steve Jobs Film", dvd2.getTitle());
                                assertEquals("Avatar: Directors Cu", dvd3.getTitle());
                               assertEquals(null, dvd4.getTitle());
                            @Test
                            public void testGetTitle(){
                                assertEquals("The Hobbit(Director)", dvd1.getTitle());
                                assertEquals("The Steve Jobs Film", dvd2.getTitle());
```

- A Fixture is a fixed state of a set of objects used as a baseline for running tests.
- Test fixtures allow tests to share common test data.
- The purpose of a test fixture is to ensure that there is a fixed environment in which tests are run so that results are repeatable.
- It includes:
 - setUp() method which runs before every test method.
 - tearDown() method which runs after every test method.
